

Tools for Changing the World

A Design Science Primer

Medard Gabel and David Heeney

CONTENTS

Dedication.....	vi
Acknowledgements.....	vi
Introduction.....	1
Our role.....	1
The challenge.....	1
The method.....	1
In summary.....	3

PART 1

Starting Up: Frames of Reference.....	5
Human development and flourishing.....	7
<i>Basic human rights:</i>	7
<i>Basic human needs:</i>	7
Natural systems flourishing.....	8
Global goals for global flourishing.....	8
Where is the world going?.....	9
Models of change/Changing the world.....	10
Big picture change.....	10
Our picture: Change we initiate.....	11
You can change the world.....	11
Seven techniques for changing the world.....	12
How is design science different from other planning processes?.....	14
<i>Present day problem-solving</i>	17
<i>Design Science is Proactive</i>	19

PART 2

Big picture design	25
Whole to particular.....	26
Thinking in systems.....	27
<i>Why think in systems?</i>	28
<i>The law of whole systems /synergy</i>	28
<i>The law of requisite variety</i>	29
<i>Redundancy ensures survival</i>	29
Starting with the whole	29
<i>Spaceship Earth</i>	30
<i>The whole world is now the only relevant unit of problem solving</i>	31
Thinking long term	32
Increasing wealth	34
Technology as a living system/ Modeling technologies on living systems.....	35
<i>Biology replaces mechanics</i>	35
<i>As we create tools, we recreate ourselves</i>	36
Doing more with less	37
Making everyone win	39
Measuring success	40
Ensuring transparency	41
Building capacity, not just solving problems.....	41
Focusing on design, not politics.....	43
Designing for regeneration, not sustainability	43
<i>Beyond sustainability and zero emissions</i>	44
Designing for development, not growth	45
Recognizing that needs are markets.....	45
Looking for trim tabs / tipping points	46
Reforming the environment, not the person	47
<i>Artifacts</i>	48
Designing for scale	48
Making visible the invisible	49
<i>Diagramming</i>	50

Trends of key variables	53
Correlation.....	53
Mapping geographic data/location/distribution mapping	54
Modelling	56
Scenarios.....	59
Hierarchical organizing	60
Metaphor	61
Input/output analysis	62
Components/processes	62
Resources used/needed/available.....	63
Who does what—organizations/actors	64
Impacts and interactions with other areas.....	64
Simulation gaming	65
Decision making criteria	66
Key indicators	66
The unquantifiable	67
Resources to draw upon.....	67
Iteration	68
Taking the design initiative	68
Being guided by moral vision	69
Working in teams	70
Group methods for developing solutions	71
Group priority setting	71
AI as a tool for defining the problem and developing solutions	71

PART 3

The Design Science planning process.....	73
Recognizing the problem situation/	
Choosing the problem	77
Moving from Problem to Problem Situation	77
Determining the problem #2	78
Moving from mess to vision.....	79
Considerations in choosing the problem	79

<i>Functional definitions</i>	81
<i>Summary</i>	81
Envisioning the Preferred State.....	82
<i>Defining the goal</i>	82
<i>Frames of reference</i>	84
<i>Brainstorming</i>	85
<i>Refining the Preferred State</i>	85
<i>Envisioning the Preferred State with AI assistance</i>	87
<i>Summary</i>	87
Defining the Problem State.....	89
<i>Lenses and yardsticks</i>	90
<i>Start with the larger system</i>	90
<i>Dimensions of the problem</i>	91
<i>Defining the Problem State with AI assistance</i>	93
<i>Summary</i>	93
Defining the Present State.....	95
<i>Context</i>	95
<i>Alternatives</i>	96
<i>Evaluating alternatives</i>	98
<i>Decision making criteria</i>	99
<i>Gap analysis</i>	99
<i>Defining the Present State with AI assistance</i>	100
<i>Summary</i>	100
Designing the strategy for achieving the Preferred State.....	101
<i>Solution and strategy development: What, how, who, where, when, cost, funding</i>	101
<i>Alternative selection</i>	102
<i>What makes a compelling design and plan?</i>	103
<i>Identifying the resources required to implement our strategy</i>	104
<i>Physical resources</i>	104
<i>Human resources</i>	104
<i>Financial/legal resources</i>	104
<i>Financial resources and whole system costs/benefits</i>	105
<i>Initiating a larger planning process</i>	106
<i>Process Summary</i>	107
<i>Explaining our strategy</i>	107

<i>Developing the Strategy for reaching the Preferred State with AI assistance</i>	108
<i>Summary</i>	109

PART 4

IMPLEMENTATION—TAKING THE INITIATIVE	111
Design Implementation	113
<i>Developing the artifact</i>	114
<i>Developing the tools or artifacts—further details</i>	116
<i>Target date for realizing the Preferred State</i>	117
<i>Actions needed to implement the strategy for achieving the Preferred State</i>	117
<i>Test/Proof-of-concept phase</i>	117
<i>Scale-up—The implementation timeline</i>	118
<i>Critical Path</i>	119
<i>Documenting the process/Communicating the plan</i>	120
<i>The communications plan</i>	121
<i>Developing the Implementation Plan with AI assistance</i>	123
<i>Summary</i>	123

CONCLUSION AND NEXT STEPS:

TAKING THE INITIATIVE—where we go from here	125
--	------------

APPENDICES

APPENDIX 1 Global Solutions Lab and New World Game	131
APPENDIX 2 Global statistical data sources and data analysis tools	135
<i>United Nations</i>	135
<i>World Bank</i>	140
<i>Other international and regional organizations</i>	142

<i>Other</i>	143
<i>United States Government</i>	147
<i>Data analysis tools</i>	149
APPENDIX 3 Solutions Libraries	151
APPENDIX 4 Bibliography	153

FIGURES

Figure 1. The global hierarchy of human development.	7
Figure 2. United Nations' Sustainable Development Goals	8
Figure 3. The Future Cone: how might the future develop?.....	9
Figure 4. A global timeline from the big bang to the present day: 5 billion years.....	33
Figure 5. Trim tab on a plane. In this photo, the trim tab is lowered on the elevator.....	47
Figure 6. Extending the range of human vision.	49
Figure 7. Parts of a wind turbine.	51
Figure 8. Proposed design for electrifying health clinics in Africa.....	51
Figure 9. World population from 5000 BC to 2000 AD	52
Figure 10. World population from 1980 to 2000	52
Figure 11. Global trends in armed conflict: 1946 - 2019.....	53
Figure 12. The relationship between per capita GDP and per capita emissions of greenhouse gases.	54
Figure 13. Buckminster Fuller's world map projection.	55
Figure 14. Growth in the population of metropolitan areas with over 5 million between 1900 and 2025 shown on the Fuller projection.	55
Figure 15. Cartogram of greenhouse gas emissions in 2020.	56
Figure 16. Traditional economic model of an economy.....	57
Figure 17. Simplified version of the model used in Earth for All.....	58
Figure 18. Model of production, consumption and recycling typical of ecosystems.....	58
Figure 19. World population trends and forecasts to 2100.....	59
Figure 20. Scenarios show sea level rise under a range of assumptions on greenhouse gas emissions.	59
Figure 21. The structure of the United Nations Development Program. An example of a hierarchy.	61
Figure 22. Inputs and outputs of the production stage of the food system	62
Figure 23. Process flow of wind energy from generation through to user.....	63
Figure 24. Potential dashboard for the SDG related to energy	67

Figure 25. Overview of the design science planning methodology	75
Figure 26. Elaboration of the design science planning methodology.....	76
Figure 27. Step one of the design science planning process: deciding what problem to focus on.	78
Figure 28. The preferred state: key constraints and opportunities	83
Figure 29. Like an iceberg, there is typically much more involved than consideration of the visible symptoms alone would suggest.	89
Figure 30. The Present State is the context of the Problem State. And, the Problem State is a part of the Present State.	96
Figure 31. The design science process for artifact development.....	115
Figure 32. A timeline shows the sequence of actions to go from the Problem State to the Preferred State..	117
Figure 33. Timeline for the wind energy component of a global energy strategy.....	119
Figure 34. The final step in the design science methodology is implementation.	121
